Report

Event Name: Coding Competition

Date of Event: 2018-02-28

Place of Event: Room 403, SPIT

Women's Week Codatron was an initiative to break the stereotypes and show that women in computing, are a force to reckon with. This two hour coding competition was held on the 28th of February, thus marking the start of Women's Week.

Right from setting the problem statements to managing the participants on the day of the event, organising Women's Week Codatron was an incredible experience.

The contestants, in a team of two, were required to solve a problem-set consisting of three different problems:

A puzzle, to test their analytical skills, because the first step before actually coding the solution to a problem is always analysing it logically.

Then the participants racked their brains to solve two competitive programming problems of Easy and Moderate level of difficulty.

Codatron provided a platform to all the participants to gain firsthand experience of competitive coding and showcase their coding skills, with an added incentive of winning exciting prizes
