Report

Event Name: Cyber Security Seminar

Date of Event: 2019-10-16

Place of Event: 008

In-Charge Member: Dr. Aarti Karande

In a world, where Internet has become a major part of our lives, where our day begins from surfing the net to check for traffic congestions and ends at online chats with our friends, cyber safety and security has become a major area for concern. Keeping this in mind, IEEE-WIE-SPIT, in collaboration with R.U.D.R.A, organized a seminar for Cyber Security on 16th October, 2019. The event commenced with the introduction and welcoming of Mr. Karan Sajnani- the Founder of R.U.D.R.A, Techmanager for Preventia Group of Companies, a Cybersecurity solutions architect and an extremely knowledgeable personality with tech skills ranging from low level computing basics to advanced network manipulation and computer visions- as the guest speaker for the day.

He began with introducing to us who an hacker actually is, surprising the students with his answer and went deeper into the domain, giving valuable insights on how everything started, is developing and continues to work. He brought to light the security measures that can be taken and how to stay a more immune to hacking. The audience was all ears to what he had to say and an interactive environment was created. At the end of the seminar, Dr Aarti Karande presented a gift, as vote of thanks, to our honourable guest and the students left with a lot more knowledge as well as an itched intellect and curiosity.
